1995 DEER HUNTING AND HARVEST REPORT

MAY 29, 1996

PREFACE

1995 DEER HUNTING AND HARVEST REPORT

Survey Approach

Resident and nonresident deer license holder samples were randomly selected from a population of all resident and nonresident deer license holders in our license database. Deer hunting and harvest data were acquired via telephone for resident license holders and via a mail survey for nonresidents.

Definitions

TOTAL HUNTERS	The number of hunters who hunted one or more days
TOTAL HUNTER DAYS	Sum of whole days or portions of days hunted
SUCCESSFUL HUNTERS	The number of hunters who killed one or more deer
PERCENT SUCCESS	The number of successful hunters divided by the total number of hunters and multiplied times 100
RSDNT	A symbol for resident
NRSDNT	A symbol for nonresident
ANTL-	A symbol for antlerless
ANTL+	A symbol for antlered
UNKWN	A symbol for unknown used to designate unknown sex
GEN A	An abbreviation for general deer "A" license, including those deer "A" licenses included with the resident Sportsman's license and nonresident Big Game Combination and Deer Combination licenses
GEN MR WT	An abbreviation for general, Multi-region, Antlerless Whitetail Deer B license
GEN MR MD	An abbreviation for general, Multi-region, Antlerless Mule Deer B license
SP	An abbreviation for special license or permit
UNKNOWN	A license category where the license used to take the deer was unknown
LOWER	Lower confidence limit at a level of confidence of 80 percent
POINT	The estimated value
UPPER	Upper confidence limit at a level of confidence of 80 percent

Explanations

The deer hunting and harvest statistics are estimates made from a sample of 54,197 questionnaires representing about 27 percent of all 200,618 deer license holders. Confidence-interval estimates are given for resident and nonresident combined hunting statistics and for mule deer, whitetail, and combined deer harvest statistics. Confidence intervals are given at the 80 percent confidence level, meaning that the actual value will be between the lower and upper limit in four out of five cases. The relative precision of the estimate increases with the size of the estimate. Regional estimates have greater relative precision than district estimates and the statewide estimates have the greatest relative precision.

(CONTINUED)

PREFACE (CONTINUED)

All valid response data are used in the estimates even when some data fields are missing. This is the reason for the various unknown categories given in the report. The unknown license type given in the harvest sections is used to represent deer kills which could not be associated with a particular license/season type. Hunting or harvest activity in an unknown or invalid hunting district within a valid region is represented as "RXX" where R is the regional number 1 through 8. An unknown district in an unknown region is represented as "XXX". The unknown district or region activities are still incorporated into the regional or state totals respectively.

Several hunting districts from regions three and four were combined beginning in 1992 to create region eight. Due to the creation of region eight, hunting and harvest trend data for regions three and four are not comparable between years before and after the creation of region eight.

DERIVATION OF LICENSE/PERMIT COUNTS

Accurate computation of the reported estimates of hunters, hunter days, and harvest are dependent on accurate counts of general licenses and special licenses and/or permits sold to resident and nonresident hunters. For license year 1995 analysis, we were unable to document the complete methodology Bill Hoskins used to compile these counts. However, through study of Bill's analysis and reporting routines we arrived at the following procedures, which should produce counts comparable to those of previous years.

In late January and early February, after compiling and sampling the master data file containing all available information on 1995 licenses and permits purchased by resident and nonresident hunters, Bill produced a frequency report which provided counts of general and special licenses/permits sold, both statewide and for each type of special license sold in each hunting district. These counts did not always agree with the final special license quotas, with the special license drawing tallies from Helena, or with the final statewide tallies of general licenses sold. In cases of disagreement, various procedures were used to obtain best estimates of license/permit counts.

Special Licenses and Permits Sold

In most cases, the frequency report based on the 1995 license master file was used to derive the counts of each type of special license sold in each hunting district. If the count of resident and nonresident licenses sold disagreed with the established total quota by more than 3%, and if the special license drawing tally from Helena suggested that all available special licenses were sold, the percents of resident and nonresident numbers from the license master file were applied to the final quota to obtain the reported counts of resident and nonresident special permits sold.

General Licenses Sold

The frequency report based on the 1995 license master file did not include all of the most recent information on general deer licenses sold. Therefore, the 1995 License Sale Report, dated 4/30/95 from the Helena License Section, was used as the most recent souce of these counts. Total general deer "A" license counts were derived from the sum of Sportsman, Adult, and Senior/Youth/ Disabled "A" licenses sold, in the case of residents, and from the sum of all Big Game Combo and Deer Combo licenses sold, in the case of non-residents. The counts of General Multi-district, Antlerless Deer "B", for white-tailed and mule deer, residents and non-residents, were taken straight from the license master file counts. This was necessary because the same license type numbers are used for drawing and surplus special licenses and for the general licenses. Counts of total resident and non-resident deer license holders were derived from the sum of general deer "A" license holders and license master file counts of those hunters who held a deer "B" license but did not also hold an "A" license.

ADDENDUM

Bill Hoskins, the computer programmer/analyst for the annual Harvest Surveys analysis and reporting effort since 1985, tragically passed away on March 13, 1996. The 1995 Deer Hunting and Harvest, Time Period of Kill, Antler Point, and Antler Point by Time Period of Kill Reports were generated using Bill's routines and procedures to the maximum extent possible. At the time of Bill's death, the hunter sample had already been drawn, the responses had been recorded, and had mostly been keyed into computer files. The hunter regulation "parameter" files, which define the number of special permits issued by district and type, had also been largely entered into a computer database. The only exception was that the breakdown of licenses and permits issued to residents and nonresidents by district and type were not available. This information was compiled using techniques described in the "Derivation of License/Permit Counts" section of this report.

Several quality control steps were taken to insure the validity of the deer statistics. Survey response data were verified at entry. The license/permit parameters were checked against the final hunting regulations. At each run of the analysis and reporting routines, diagnostic summaries were generated which indicated invalid response records and summarized the sampled percent of the license/permits issued by hunting district and type. Those showing oversampling were flagged. Inconsistencies and/or irregularities revealed by these diagnostic reports pointed to errors in either the response or parameter files. The reports were reviewed by research and management biologists before printing.

TIME PERIOD OF KILL

MONTANA DEPARTMENT OF FISH, WILDLIFE & PARKS

1995 DEER TIME PERIOD OF KILL REPORT

MAY 29, 1996

PREFACE

1995 DEER TIME PERIOD OF KILL REPORT

Survey Approach

Resident and nonresident deer license holder samples were randomly selected from a population of all resident and nonresident deer license holders in our license database. Deer hunting and harvest data were acquired via telephone for resident license holders and via a mail survey for nonresidents.

Definitions

UNKWN	A symbol for unknown used to designate unknown time period of kill
GEN A	An abbreviation for general deer "A" license, including those deer "A" licenses included with the resident Sportsman's license and nonresident Big Game Combination and Deer Combination licenses
GEN MR WT	An abbreviation for general, Multi-region, Antlerless Whitetail Deer B license
GEN MR MD	An abbreviation for general, Multi-region, Antlerless Mule Deer B license
SP	An abbreviation for special license or permit
UNKNOWN	A license category where the license used to take the deer was unknown

Explanations

The deer time period of kill statistics are from a sample of 54,197 questionnaires representing about 27 percent of all 200,618 deer license holders. No expansions or estimates are given. The percentages are from the actual sample data collected. Sample number killed in each license category is given on the right side of each page. To obtain estimates of the actual number killed in a given time period, the percentages can be applied to the kill statistics in the hunting and harvest section of this report.

All valid response data are used in the analyses even when some data fields are missing. This is the reason for the various unknown categories given in the report. The unknown license type given in the harvest sections is used to represent deer kills which could not be associated with a particular license/season type. Hunting or harvest activity in an unknown or invalid hunting district within a valid region is represented as "RXX" where R is the regional number 1 through 8. An unknown district in an unknown region is represented as "XXX". The unknown district or region activities are still incorporated into the regional or state totals respectively.

ANTLER STATISTICS

MONTANA DEPARTMENT OF FISH, WILDLIFE & PARKS

1995 WHITETAIL DEER ANTLER STATISTICS

MAY 29, 1996

PREFACE

1995 DEER ANTLER STATISTICS

Survey Approach

Resident and nonresident deer license holder samples were randomly selected from a population of all resident and nonresident deer license holders in our license database. Deer hunting and harvest data were acquired via telephone for resident license holders and via a mail survey for nonresidents.

Definitions

ANTLER TYPE...The number of points on each side
FREQUENCY.....The number of occurances of the given antler type in the given hunting unit within the sample data obtained
PERCENT.......The percentage of the total represented by each frequency

Explanations

The deer antler point statistics are from a sample of 54,197 questionnaires representing about 27 percent of all 200,618 deer license holders. No expansions or estimates are given. The frequencies and percentages are from the actual sample data collected. Total sample number killed in each hunting unit is given at the bottom of the frequency column. To obtain estimates of the actual number killed with a particular antler point count the percentages can be applied to the kill statistics for bucks in the hunting and harvest section of this report.

All valid response data are used in the analyses even when some data fields are missing. This is the reason for the unknown hunting unit categories given in the report. Kills in an unknown or invalid hunting district within a valid region are represented as "RXX" where R is the regional number 1 through 8. An unknown district in an unknown region is represented as "XXX". The unknown district or region activities are still incorporated into the regional or state totals respectively.
